... and Venlo

This facility located in the Netherlands offers the highest quality repairs on rotating equipment. The repair capabilities cover all modern gas turbine models, including F-class technology turbines.

This company has more than 30 years experience in assisting owners and operators to realize the full potential of their power plants.

Our team has responded to the client's desire for a non-OEM supply source for new parts manufacturing and supplies a wide range of new gas turbine components.

In addition an experienced Field Services group offers minor inspections, right up to major overhauls on an ad-hoc basis or as part of a term contract.
